

Tour Length Comparison - 150-City Maps

Only tour length is shown. Source 100-200 values are sorted within each panel by BlindBlendACO tour length: 1-101.

MaxMinACO

Tour length averages

With Cross Check

BaselineACO: 29,612

BlindBlendACO: 28,370

ElitistACO: 29,493

MaxMinACO: 28,541

Without Cross Check

BaselineACO: 30,383

BlindBlendACO: 29,012

ElitistACO: 30,094

MaxMinACO: 29,415

With Cross Check

This line chart displays the tour length for 150-city maps across 101 sorted runs, including a cross-check. The y-axis, labeled 'Tour length', ranges from 25,928 to 33,675. The x-axis, labeled 'Sorted map / run index', ranges from 1 to 101. Four algorithms are compared: BaselineACO (blue), BlindBlendACO (purple), ElitistACO (red), and MaxMinACO (green). Each algorithm's performance is shown as a line with circular markers. Horizontal dashed lines indicate the average tour length for each algorithm. BlindBlendACO consistently shows the lowest tour lengths, while ElitistACO shows the highest. MaxMinACO and BaselineACO perform in the middle range.

Algorithm	Average Tour Length
BaselineACO	29,612
BlindBlendACO	28,370
ElitistACO	29,493
MaxMinACO	28,541

Without Cross Check

This line chart displays the tour length for 150-city maps across 101 sorted runs, without a cross-check. The axes and data series are the same as the 'With Cross Check' chart. The overall tour lengths are higher than in the cross-check scenario. The relative performance of the algorithms remains similar, with BlindBlendACO being the most efficient and ElitistACO being the least efficient. The lines show more volatility compared to the cross-check scenario.

Algorithm	Average Tour Length
BaselineACO	30,383
BlindBlendACO	29,012
ElitistACO	30,094
MaxMinACO	29,415

Sorted map / run index
