

Tour Length Comparison - 250-City Maps

Only tour length is shown. Source 100-200 values are sorted within each panel by BlindBlendACO tour length: 1-101.

Algorithm colors

BaselineACO

BlindBlendACO

ElitistACO

MaxMinACO

Tour length averages

With Cross Check

BaselineACO: 64,659

BlindBlendACO: 60,571

ElitistACO: 64,414

MaxMinACO: 61,450

Without Cross Check

BaselineACO: 66,797

BlindBlendACO: 62,814

ElitistACO: 66,279

MaxMinACO: 64,422

With Cross Check

This line chart displays the tour length for four algorithms across 101 sorted maps/runs. The y-axis, labeled 'Tour length', ranges from 55,993 to 71,811. The x-axis, labeled 'Sorted map / run index', ranges from 1 to 101. The algorithms are represented by colored lines: BaselineACO (blue), BlindBlendACO (purple), ElitistACO (red), and MaxMinACO (green). Horizontal dashed lines indicate the average tour length for each algorithm. BlindBlendACO consistently shows the lowest tour lengths, while BaselineACO and ElitistACO show the highest and most volatile results.

Algorithm	Average Tour Length (With Cross Check)
BaselineACO	64,659
BlindBlendACO	60,571
ElitistACO	64,414
MaxMinACO	61,450

Without Cross Check

This line chart displays the tour length for the same four algorithms across 101 sorted maps/runs, but without a cross-check. The axes and legend are identical to the 'With Cross Check' chart. In this scenario, the tour lengths for all algorithms are generally higher and more volatile than in the 'With Cross Check' scenario. BlindBlendACO remains the most stable and lowest-performing algorithm, while BaselineACO and ElitistACO show significantly higher and more fluctuating tour lengths.

Algorithm	Average Tour Length (Without Cross Check)
BaselineACO	66,797
BlindBlendACO	62,814
ElitistACO	66,279
MaxMinACO	64,422

Sorted map / run index
