

Tour Length Comparison - 200-City Maps

Only tour length is shown. Source 100-200 values are sorted within each panel by BlindBlendACO tour length: 1-101.

Algorithm colors

BaselineACO

BlindBlendACO

ElitistACO

MaxMinACO

Tour length averages

With Cross Check

BaselineACO: 46,002

BlindBlendACO: 43,643

ElitistACO: 45,865

MaxMinACO: 43,904

Without Cross Check

BaselineACO: 47,534

BlindBlendACO: 44,812

ElitistACO: 47,056

MaxMinACO: 45,660

With Cross Check

This line chart displays the tour length for four algorithms across 101 sorted maps/runs. The y-axis, labeled 'Tour length', ranges from 40,108 to 51,574. The x-axis, labeled 'Sorted map / run index', ranges from 1 to 101. The algorithms are represented by colored lines: BaselineACO (blue), BlindBlendACO (purple), ElitistACO (red), and MaxMinACO (green). Dashed horizontal lines indicate the average tour length for each algorithm. BlindBlendACO consistently shows the lowest tour lengths, while ElitistACO shows the highest. MaxMinACO and BaselineACO perform similarly, with BaselineACO generally having slightly higher tour lengths than MaxMinACO.

Algorithm	Average Tour Length (With Cross Check)
BaselineACO	46,002
BlindBlendACO	43,643
ElitistACO	45,865
MaxMinACO	43,904

Without Cross Check

This line chart displays the tour length for the same four algorithms across 101 sorted maps/runs, but without a cross-check. The axes and legend are identical to the 'With Cross Check' chart. The overall tour lengths are higher than in the first chart, reflecting the lack of cross-checking. The relative performance of the algorithms remains similar: BlindBlendACO is the most efficient, followed by MaxMinACO, BaselineACO, and ElitistACO is the least efficient.

Algorithm	Average Tour Length (Without Cross Check)
BaselineACO	47,534
BlindBlendACO	44,812
ElitistACO	47,056
MaxMinACO	45,660

Sorted map / run index
