

Tour Length Comparison - 200-City Maps

Only tour length is shown. Source 100-200 values are sorted within each panel by BlindBlendACO tour length: 1-101.

Algorithm colors

BaselineACO

BlindBlendACO

ElitistACO

MaxMinACO

Tour length averages

With Cross Check

BaselineACO: 46,002

BlindBlendACO: 43,643

ElitistACO: 45,865

MaxMinACO: 43,904

Without Cross Check

BaselineACO: 47,534

BlindBlendACO: 44,812

ElitistACO: 47,056

MaxMinACO: 45,660

With Cross Check

This line chart displays the tour length for four algorithms across 101 sorted maps/runs. The y-axis, labeled 'Tour length', ranges from 40,108 to 51,574. The x-axis, labeled 'Sorted map / run index', ranges from 1 to 101. The algorithms are: BaselineACO (blue), BlindBlendACO (purple), ElitistACO (red), and MaxMinACO (green). Horizontal dashed lines indicate the average tour length for each algorithm. BlindBlendACO has the lowest average tour length, followed by MaxMinACO, BaselineACO, and ElitistACO. The chart shows significant fluctuations in tour length across the sorted maps, with ElitistACO generally having the highest values and BaselineACO having the highest peaks.

Without Cross Check

This line chart displays the tour length for the same four algorithms across 101 sorted maps/runs. The axes and legend are identical to the 'With Cross Check' chart. The overall trend is similar, but the tour lengths are generally higher than in the 'With Cross Check' scenario. The fluctuations are more pronounced, particularly for BaselineACO and ElitistACO, which show higher peaks and more variability in their tour lengths across the sorted maps.

Sorted map / run index
